

Checkout Update Plan

Square Checkout API — 4 Changes Implementation

Fixing taxes, shipping tiers, catalog linking, and item-type-based shipping logic

Prepared for Development Handoff · 2026

squirrelmadeproducts.com

#	Change	What It Fixes
1	Switch to Catalog Item IDs	Taxes apply automatically from Square catalog
2	Add item type to cart (bottle / bag)	Enables category-based shipping logic
3	Custom shipping tier logic	Correct shipping charged per item type & quantity
4	Apply 7% sales tax	Ensures tax is applied if not already in catalog

Background

The Square Checkout API integration is live and functioning. However, three issues need to be resolved: taxes are not being applied correctly, shipping costs are not reflecting the correct tiers, and line items are being passed as plain text rather than linked to the Square Item Catalog. The following four changes address all of these.

CHANGE 1

Switch Line Items to Square Catalog IDs

Why this is needed

Currently, line items are built from plain text (name + price). Square cannot connect these to your catalog, so taxes and item details are not applied. Switching to catalog object IDs lets Square pull the item details — including any taxes assigned — automatically.

What changes

- Each Add to Cart button needs a **data-catalog-id** attribute added to the HTML
- The cart module stores **catalogObjectId** alongside each item
- The backend maps line items using **catalogObjectId + quantity only** — no name or price

Frontend — Add to Cart button HTML

```
<button  
  class="add-to-cart-btn"  
  data-name="Basil Infused EV00"  
  data-price="18.99"  
  data-catalog-id="CATALOG_OBJECT_ID_HERE"  
  data-type="bottle"  
>  
  Add to Cart  
</button>
```

Backend — updated line item mapping

```
const squareLineItems = lineItems.map(item => ({  
  catalogObjectId: item.catalogObjectId, // replaces name + price  
  quantity: String(item.quantity)  
  // Square pulls price and taxes from the catalog automatically  
}));
```

■ HOW TO GET IDs

To get catalog object IDs, call GET `/v2/catalog/list?types=ITEM` using your Square Access Token, or find them in Square Dashboard → Items → click any item → the ID is in the URL. Each product button needs its own ID.

**CHANGE
2****Add Item Type to the Frontend Cart**

Why this is needed

Squirrel Made sells two physical item types that ship differently — bottles (olive oils and balsamic vinegars) and bags (spice blends and seasonings). The backend needs to know which type each cart item is in order to calculate the correct shipping fee. This is done by tagging each product button with a data-type attribute.

What changes

- Every product button gets **data-type="bottle"** or **data-type="bag"**
- The cart module stores **type** alongside name, price, catalogObjectId, and quantity

HTML — olive oils and balsamics

```
<button class="add-to-cart-btn"
data-name="Basil Infused EV00"
data-price="18.99"
data-catalog-id="CATALOG_ID_HERE"
data-type="bottle"> <!-- bottle for all oils and balsamics -->
Add to Cart
</button>
```

HTML — spice blends and seasonings

```
<button class="add-to-cart-btn"
data-name="Herb & Garlic Spice Blend"
data-price="12.99"
data-catalog-id="CATALOG_ID_HERE"
data-type="bag"> <!-- bag for all spice blends and seasonings -->
Add to Cart
</button>
```

Cart module — store type when adding items

```
addToCart({
  name: btn.dataset.name,
  price: parseFloat(btn.dataset.price),
  catalogObjectId: btn.dataset.catalogId,
  type: btn.dataset.type // "bottle" or "bag"
});
```

CHANGE
3**Custom Shipping Tier Logic****Shipping rules**

Item Type	Quantity	Shipping Cost
Bottles (oils & balsamics)	1 – 3 bottles	\$6.50
Bottles (oils & balsamics)	4 or more bottles	Free
Bags (seasonings & spice blends)	1 – 2 bags	\$3.00
Bags (seasonings & spice blends)	3 or more bags	Free
Mixed order (bottles + bags)	Bottles under 4	\$6.50 (bottle rate applies)
Mixed order (bottles + bags)	4+ bottles	Free (covers whole order)

Backend — getShippingFee() function

```
function getShippingFee(lineItems) {  
  const bottleCount = lineItems  
    .filter(i => i.type === "bottle")  
    .reduce((sum, i) => sum + i.quantity, 0);  
  
  const bagCount = lineItems  
    .filter(i => i.type === "bag")  
    .reduce((sum, i) => sum + i.quantity, 0);  
  
  const hasBottles = bottleCount > 0;  
  const hasBags = bagCount > 0;  
  
  // Bottles only  
  if (hasBottles && !hasBags) {  
    if (bottleCount >= 4) return null; // free  
    return { name: "Standard Shipping", amount: 650n }; // $6.50  
  }  
  
  // Bags only  
  if (hasBags && !hasBottles) {  
    if (bagCount >= 3) return null; // free  
    return { name: "Standard Shipping", amount: 300n }; // $3.00  
  }  
  
  // Mixed order – bottles + bags
```

```
if (hasBottles && hasBags) {  
  if (bottleCount >= 4) return null; // free  
  return { name: "Standard Shipping", amount: 650n }; // bottle rate applies  
}  
  
return null;  
}
```

Backend — apply shipping in checkoutOptions

```
const shipping = getShippingFee(lineItems);  
  
checkoutOptions: {  
  redirectUrl: "https://squirrelmadeproducts.com/order-confirmed",  
  askForShippingAddress: true,  
  ...(shipping && {  
    shippingFee: {  
      name: shipping.name,  
      charge: { amount: shipping.amount, currency: "USD" }  
    }  
  })  
}
```

CHANGE 4

Apply 7% Sales Tax

Why this is needed

Tax must be applied to all orders. If your Square catalog items do not already have a tax rate assigned to them, add it explicitly in the order payload. If taxes are already assigned in the catalog (from Change 1), this change can be skipped to avoid double-charging tax.

■ CHECK FIRST

Before applying this change, check Square Dashboard → Items → Taxes to see if a tax rate is already assigned to your products. If a 7% tax is already attached in the catalog, skip this change — switching to catalog IDs in Change 1 will handle it automatically.

Backend — add taxes to the order payload

```
order: {  
  locationId: process.env.SQUARE_LOCATION_ID,  
  lineItems: squareLineItems,  
  taxes: [  
    {  
      name: "Sales Tax",
```

```
percentage: "7.0",  
scope: "ORDER" // applies to the entire order  
}  
]  
}
```

Google Antigravity Prompt

Copy and paste the following prompt directly into Google Antigravity to implement all four changes. Ask it to show a summary of files modified before applying.

I need you to update my Square Checkout API integration with these changes:

CHANGE 1 – Switch to Catalog IDs

Update backend line item mapping to use catalogObjectId + quantity only.

```
const squareLineItems = lineItems.map(item => ({  
  catalogObjectId: item.catalogObjectId,  
  quantity: String(item.quantity)  
}));
```

CHANGE 2 – Add item type to frontend cart

Add data-type="bottle" to all olive oil and balsamic buttons.

Add data-type="bag" to all spice blend and seasoning buttons.

Store type in the cart module alongside name, price, catalogObjectId, quantity.

CHANGE 3 – Add shipping tier logic to backend

Add this function and call it before building the Square payload:

```
function getShippingFee(lineItems) {  
  const bottleCount = lineItems.filter(i => i.type === "bottle")  
    .reduce((sum, i) => sum + i.quantity, 0);  
  const bagCount = lineItems.filter(i => i.type === "bag")  
    .reduce((sum, i) => sum + i.quantity, 0);  
  const hasBottles = bottleCount > 0;  
  const hasBags = bagCount > 0;  
  if (hasBottles && !hasBags) {  
    if (bottleCount >= 4) return null;  
    return { name: "Standard Shipping", amount: 650n };  
  }  
  if (hasBags && !hasBottles) {
```

```
if (bagCount >= 3) return null;
return { name: "Standard Shipping", amount: 300n };
}
if (hasBottles && hasBags) {
  if (bottleCount >= 4) return null;
  return { name: "Standard Shipping", amount: 650n };
}
return null;
}
```

Apply shipping in checkoutOptions:

```
const shipping = getShippingFee(lineItems);
...(shipping && { shippingFee: {
  name: shipping.name,
  charge: { amount: shipping.amount, currency: "USD" }
}})
```

CHANGE 4 – Add 7% sales tax (only if not already in Square catalog)

Add to the order object:

```
taxes: [{ name: "Sales Tax", percentage: "7.0", scope: "ORDER" }]
```

Do not change anything else.

Show me a summary of every file modified before applying changes.

Testing Checklist

After your developer applies these changes, verify each of the following in the Square sandbox before going live:

Taxes

- Tax appears on Square checkout page for all orders
- Tax rate is 7% of the order subtotal
- Tax is not applied twice (check if catalog already had tax assigned)

Shipping — Bottles

- 1 bottle → \$6.50 shipping shown at checkout
- 2 bottles → \$6.50 shipping shown at checkout
- 3 bottles → \$6.50 shipping shown at checkout
- 4 bottles → free shipping (no shipping line item)
- 5+ bottles → free shipping

Shipping — Bags

- ■ 1 bag → \$3.00 shipping shown at checkout
- ■ 2 bags → \$3.00 shipping shown at checkout
- ■ 3 bags → free shipping
- ■ 4+ bags → free shipping

Shipping — Mixed Orders

- ■ 2 bottles + 1 bag → \$6.50 shipping (bottle rate)
- ■ 4 bottles + 2 bags → free shipping
- ■ 0 bottles + 3 bags → free shipping

Catalog Linking

- ■ Product names and prices on Square checkout match your catalog
- ■ No ad-hoc pricing — all prices pulled from Square
